

High-performance

GLASS-FROSTER

**Cool tastes
better!**

Der Bohner Model

High-performance GLASS-FROSTER

BOHNER-Glass-Froster – not just engineering, but also a real eye-catcher!
What kind of glasses do you want to frost?

Possible uses:

- ◆ **Beer-glasses:**
 The sight of a cool beer with a perfect foam head signals complete drinking pleasure.
 When the glass has been pre-cooled or frosted, the foam head is longer-lasting and the beer stays cold for longer.

- ◆ **Cocktail-glasses / juice-glasses:**
 The "iced" surface of the glass increases the appeal of the drinks such as freshly-pressed natural juice, without diluting the beverage and keeps it cooler for longer.
 Spiced up with lighting effects, the BOHNER glass froster provides fascinating illumination and creates a very special ambience in the bar or restaurant.

- ◆ **Desserts / ice-cream specialities:**
 Pre-cooled dessert dishes or sundae glasses keep the tasty arrangement in shape for longer, in their "iced" condition they are an additional eye-catcher in every restaurant or café.

Example:
 GLASS-FROSTER
 for 10 beer glasses

2 rows
 with 5 chill taps each
 - Plug-in cooling -

Example:
 GLASS-FROSTER
